The elevation of the derrick floor above sea level is 6757 ft. Ground Elev.

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudlogging jobs, cementing points, and all other important proposed work)

To change plans on Production String Only:

Will set two (2) strings of 2-7/8" Casing for dual completion. Lower string will be set at total depth in Basin Dakota Zone; second string will be set in Gallup Zone, and both strings cemented with sufficient cement to protect both zones, (Basin Dak. and Gallup). D. V. Staggering tool will be run in second string and set approximately 100' below Chacra zone and cemented with sufficient cement to protect Chacra and Pictured Cliffs Zones.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
