DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

Spudded 11" hole on December 26, 1959 and drilled to 493'. Set 8-5/8" casing at 493' with 300 sacks cement containing 2% Calcium Chloride. Cement circulated. After waiting on cement, tested casing and water shut off with 500 psi for 30 minutes, which held with no indication of pressure drop. Reduced hole to 7-7/8" at 493' and resumed drilling.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
