Attn: Mr. J. J. August

Dear Sir:

On February 18, 1965 we received in this office two copies of Federal Form 9-330, "Well Completion Report" for your #1 Mobil Federal well located in the SE¹ Section 36-24N-1W. The same date we also received Form C-104, "Request for Allowable" and Form C-110 "Authorization to Transport" for the same well.

On the Federal Well Record form the potential was shown to be 75 barrels of oil and 635 MCF of gas in 24 hours. Form C-104 indicated that the potential was 635 MCF of gas per day with no mention being made that any oil was produced. I have noted that the well was sand-oil fracked with 1025 barrels of oil and I am wondering if the oil volume shown on the Federal report does not consist of load oil. It will be necessary for us to know what the potential of the well actually is in order to know whether to assign it an oil or gas allowable.

YES

Will you please clarify the matter for us.

Yours very truly

Mr. Arnold -
your form-104 asked for volume of oil - "at this time
oil recovered". The 75 bbls + 635 MCF/day rate
was from a test conducted by Emery C. Arnold
by Morris Jones. In order to complete
the forms - I submitted two parties
cc: U.S.G.S., Farmington, N.M.
Oil Conservation Commission
Santa Fe, N.M.
Following recovery of this oil - I will
re-submit form C-104 if you so advise.
T.T.A.R.D.S.
