NORTHWEST HEW MEXICO PACKER LEAFAGE TEST CONTINUES

- 1. A packer leakage test shall be immediated or sair allowing about ited well within seven days after actual completion of the well, and annually thereafter as prescribed by the order authorizing the altipur completion. Such tests shall also be commenced on all multipus where he said seven days following recompletion and/or chemical or allowing recompletion and/or chemical or allowing recompletion and/or chemical or allowing realizable. Tests shall also be taken the packet or the tubing have been disturbed. Tests shall also be taken as that communication is suspected or then requested as
- At least 72 hours prior to the commencement of any packer leakage test, the operator shall notify the Commission in writing of the exact time the test is to be commenced. Offset operators shall also be so notified.
- 3. The packer leakage test shall commence when both zones of the dual completion are shut-in for pressure stabilization. Both zones shall memain shut-in until the well-head pressure in sections of Fitzed provides however, that they need not remain shut-in more than a section of the section
- 4. For Flow Test No. 1, one zone of the dual completion while the produced at the normal rate of production while the other zone is a rate of production while the other zone is a rate of production while the other zone is a rate of such test shall be continued for se en days in the case of a rate of or 24 hours in the case of an oil well. Note if one as a rate of proper leakage test, a gas well is being flowed to the stoophere that to the lack of a pipeline connection the flow puriod shall be coree how a.
- Following completion of Flow feet No. 1 the well that again on short in, in accordance with Paragraph 3 above.
- 6. Flow Test No. 2 shall be conducted even though no leak was indicated during Flow Test No. 1. Procedure for flow feet No. 2 as to be the make as for Flow Test No. 1 except that the previously cloud we do to shall be main shut-in while the zone which was previously clut-in is proceded.

(HOUSE FROM SHOT-IN)

- 7. Pressures for gas-zone tests such that the cord on each zone with a deadweight pressure gauge at time intervals : follows: 3-hour tests; immediately prior to the beginning of each flow-period, at diffeen-minute intervals during the first hour thereof, and at hourly intervals thereafter, including one pressure measurement camediately prior to the conduction of each flow period. 7-day tests; immediately prior to the conduction of each flow period, at least one time during each flow period (at approximately the midway point) and immediately prior to the conclusion of each flow period. Other pressures may be taken as desired, or say be requested on wells which have previously shown questionable test Gaud.
- 24-hour oil zone tests; all pressures, turoughout the entire test, shall be continuously measured and recorded with recording pressure gauges, the accuracy of which must be checked at least twice, once at the beginning and once at the end of each test, with a deadweight pressure gauge. If a well is a gas-oil or an oil-gas dual completion, the recording gauge shall be required on the oil zone only, with deadweight pressures as required above being taken on the gas zone.
- 8. The results of the above-described tests shall be filed in triplicate within 15 days after completion of the test. Tests shall be filed with the Aztec District Office of the New Mexico Oil Conservation Commission on Northwest New Mexico Packer Leakage Test form Revised 11-1-58, with all deadweight pressures indicated thereon as well as the flowing teaperatures (gas zones only) and gravity and GOR (oil zones only). A pressure versus time curve for each zone of each test shall be constructed on the reverse tale of the Packer Leakage Test Form with all deadweight pressure points taken indicated thereon. For oil zones, the pressure curve should also indicate all key pressure changes which may be reflected by the recording gauge charts. These key pressure changes should also be tabulated on the front of the Packer Leakage Test Form.
