(Note: Report results of multiple completion on Well Completion or Recompletion Report and Log form.)

17. DESCRIBE PROPOSED OR COMPLETED OPERATIONS (Clearly state all pertinent details, and give pertinent dates, including estimated date of starting any proposed work. If well is directionally drilled, give subsurface locations and measured and true vertical depths for all markers and zones pertinent to this work.) \*

This well is presently being produced from the Chacra Formation from 3840-3949'.  
The Completion report was filed on 5/21/80.

Cotton Petroleum Corporation intends to dually complete this well in the Charca and Pictured Cliffs Formation. Approval for the dual completion has been received from the Oil Conservation Division, State of New Mexico in Administrative Order Mc-2652 (attached.)

The Pictured Cliffs will be perforated with 1 JSPF from 2964-2984', and 2990-2996'. This zone will be fractured with 72,000 gallons 70% quality foam containing 90,000# 12-20 mesh sand. The treatment will be performed down casing, with a bridge plug set between the Pictured Cliffs and the Chacra, to protect the Chacra Formation.
