Re: Overproduced wells

Dear Mr. Greer:

Order R-6469-B established allowable restrictions for some of your wells within proximity to the Gavilan-Mancos Pool. The restrictions are in exception to the rules for the West Puerto Chiquito Mancos Pool. Consequently, these wells are subject to the oil allowable and GOR limitations imposed on the Gavilan Mancos Pool which allow up to 400 barrels of oil per day or up to 240 MCF/D of gas.

Using these limitations and applying them to the production reported on your C-115's, we have found that as of the end of November the Canada Ojitos Unit #29 located in E-6-25N-1W is overproduced by 20,585 MCF. This will require the immediate shut-in of the well until such time as the well comes back into balance.

Sincerely,

Frank T. Chavez
District Supervisor

FTC/dj
