Only change from APD in surface casing - 235' run instead of planned 200'

Well was spudded approximately 1845 pm September 30, 1995.

Surface casing was landed and plug down at 0130 Oct. 1. At 0830 Oct. 1 a few intermittent gas bubbles were noted in mud in the cellar. Appeared to be coming up annulus. Doug Endsley called OCD and Farmington BLM (Albq. BLM unavailable). After WOC 10 hours, pressured up casing, drilled out cement and into 10' of new formation. Pressured up formation. No circulation out of the annulus. Drilled ahead for one hour - no more bubbles. Pumped out the cellar, found TOC within 2' of grade. Filled cellar with water - no more bubbles.
