13. Describe Proposed or Completed Operations

It is intended to change the cement on the production casing of the subject well from a two stage cement job to a single stage cement job to facilitate rigless completion. The lead cement will consist of 200 sacks injection with 30,500 SCF per sack of Nitrogen, then 200 sacks injected with 58.75 SCF per sack of Nitrogen, then 280 sacks injected with 86.95 SCF per sack of Nitrogen all using a base cement consisting of Class "G" 50/50 poz with 5 pps Gilsonite, 0.4% fluid loss (lead slurry volume 1502 cu.ft., 80% excess). We will then tail in with 1340 sacks Class "G" 50/50 poz with 5 pps Gilsonite, 0.4 pps fluid loss (tail slurry volume 1768 cu.ft., 100% excess) After bumping the plug we will cap the foam cement with 85 sacks Class "B" cement w/2% calcium chloride (cap slurry volume 101 cu.ft) down the annulus.

14. I hereby certify that the foregoing is true and correct.
