If well is directionally drilled, give subsurface locations and measured and true vertical depths for all markers and zones pertinent to this work.)*

We set a packer at 6100' as shown on attached diagram. Intend to inject down tubing 50 Bbls. of condensate and 30 Bbls. Iso-propyl alcohol to increase permeability of water to the Gallup sand by approximately 40% as shown by core testing. After completion of this treatment we intend to inject 750 Bbls. of water per day down the tubing as approved by NMOCC case #3114 Order No. R-2796 dated Dec. 14, 1964.

This unit agreement has not been finally approved by the USGS in Washington yet, however, the unit as to form has been approved by them and we are filing with the USGS in Roswell a fully executed copy of the Unit Agreement for them to file in Washington for the final approval.
