17. DESCRIBE PROPOSED OR COMPLETED OPERATIONS (Clearly state all pertinent details, and give pertinent dates, including estimated date of starting any proposed work. If well is directionally drilled, give subsurface locations and measured and true vertical depths for all markers and zones pertinent to this work.)*

Pull tubing. Re-run tubing with packer and set at 6800'. Pump 3,500 gallons of 15% acid in existing perforations, (6883-6927), and overflush with oil. Swab back without removing packer. Remove packer and place Gallup, Graneros and Greenhorn back into production.

We intend to run a cement bond log on this well prior to injecting acid. In the event we do not have good cement in any of the three zones this well is open to, we intend to squeeze said formation(s) and then to re-complete said formation(s) in a manner similar to the way they are currently open with minor modifications. If the Gallup is recompleted, we will probably open the Skelly sands as well as the Mayre sand.
