

EL PASO NATURAL GAS COMPANY

Memorandum

o Mr. L. M. Parrish, Jr.
From: Production Department

Date: February 21, 1975
Place: Farmington, New Mexico

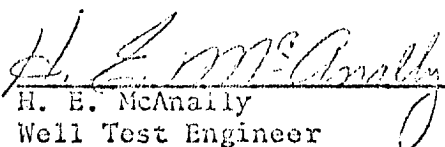

Re: W.M. Galloway Dry Creek #1, which is
located 1650'S, 1180'E, Sec. 5, T24N,
R10W, San Juan County, New Mexico
Re-completed as a Gallup oil well.

A two inch orifice well tester was installed on the casing with a one half inch plate and a pressure recorder to record the back-pressure maintained. The casing was turned on through the orifice well tester and the tubing was pumped for a period of 24 hours. The well stabilized after one hour and maintained 28 psig for the remainder of the test. This indicates the well has the ability to produce 222 MCF/D at a line pressure of 28 psig.

No gas sample was caught at the time of the test therefore, no gravity can be reported.

This test was conducted at the request of Mr. Galloway for the purpose of attempting to connect this well to our low pressure system in the area.

If there is any further information needed, please let me know.

H. E. McAnally
Well Test Engineer
