NOTE: Report results of multiple completion or zone change on Form 9-330.)

U. S. GEOLOGICAL SURVEY
FARMINGTON, N. M.

17. DESCRIBE PROPOSED OR COMPLETED OPERATIONS (Clearly state all pertinent details, and give pertinent dates, including estimated date of starting any proposed work. If well is directionally drilled, give subsurface locations and measured and true vertical depths for all markers and zones pertinent to this work.)*

The subject well was completed 11-12-81, testing 20 BOPD flowing on the initial production test dated 11-12-81. It should be clarified that this well has been equipped with a stop-cock time controller since completion and the well will not flow continuously. It is necessary to intermittently shut-in the well to allow pressure to build up sufficiently to lift a head of oil to the surface. The stop-cock controller is currently set to flow 30 minutes and shut in 11 hours and 45 minutes, twice each day. Our past production records reflect that all produced gas was vented; however, it should be clarified that this gas venting is an integral part of the stop-cock method of producing the well, and thus the produced gas is being utilized on the lease to lift the oil for the benefit of the lease. Our future production records will reflect this method of operation more clearly.
