DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

It is intended to plug and abandon this well in the following manner:

1. Squeeze perforations from 3842-52 and 3877-85 with 75 sacks neat cement.
2. Cut and pull 4-1/2" casing and spot 100 feet cement plug.
3. Set surface plug with marker.

We were unable to produce gas in commercial quantities due to abundant salt water problem and were unable to squeeze off water.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
