DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

It is our intention to deepen this well from its present depth, 2995', to the Charra or approximately 3880'. We intend to cement a 4-1/2" liner from approximately 50' above the base of the 7" casing before testing. Present production from the Picture Cliff Formation is not economically feasible to produce.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
