## DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

TD 7852'. The Dakota formation has been fractured in open hole from 7800-7852, and thru perfs in the 5" liner fr 7634-72, 7686-7716, 7736-32, 7762-72 and 7780-88. The Graneros has been fractured thru perfs fr 7534-50, 7570-76, 7584-90 & 7610-16. It is proposed to set a BP @ 7525' and perf the 5" liner opposite the Masaverde form fr 4496-5590. The Masaverde will then be fractured in three stages using approx 40,000 gals wtr for each stage. The well will be cleaned out to total depth, 2-3/8" OD tubing will be run with Hookwall packer set @ approx 7504' to separate the Masaverde and the Graneros-Dakota formations. The well will be completed to produce the Graneros-Dakota thru the 2-3/8" tubing and the Masaverde thru the tubing-casing annulus. The W/2 of Section 29, containing 320 acres, is dedicated to the Masaverde formation and the SW/4 of Section 29, containing 160 acres, is dedicated to the Graneros-Dakota formation.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
