The elevation of the ~~surface~~ ^{ground} above sea level is **6775** ft.

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

TD 7852'. Both Mesaverde and Dakota formations were marginal prior to logging off. Only with periodic swabbing could either zone be produced and this practice is not economical. Propose to spot 35 sx cement plug in 5" casing from 7852-7500; 75 sx cement plug in 5" casing from 5650-4900'. Salvage as much 7" casing as possible. Spot 100' cement plug (30 sx) from 50' above 7" stub to 50' inside 7". Spot 10 sx cement plug at surface with dry hole marker.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
