Figure 1. The effect of the concentration of the *Agrobacterium* strain on the transformation efficiency of *Agrobacterium* strain on *Arabidopsis* cells. The *Agrobacterium* strain was cultured in YEA medium for 24 h at 28 °C. The cell concentration was adjusted to 1.0 × 10⁸ cells/ml. The cells were then transformed into *Arabidopsis* cells. The transformation efficiency was determined by the number of transformants per 10⁶ cells. The results are shown in Table 1.
