November 10, 1961

Well No. 2 is located 1820 ft. from N line and 1130 ft. from W line of sec. 18

SW/4, Section 18 T-26-N, R-6-W 105PM  
(1/4 Sec. and Sec. No.) (Twp.) (Range) (Meridian)  
Basin Dakota & Blanco Mesaverde Rio Arriba New Mexico  
(Field) (County or Subdivision) (State or Territory)

The elevation of the derrick floor above sea level is 5500 ft. G. L.

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

Original intention to drill called for Dakota completion only.

Change of plans as follows: We propose to drill complete from Mesaverde and Dakota formations by perforating and fracturing the Dakota, set permanent packer at approximately 7200' (above Dakota), perforate and fracs Mesaverde. Run dual string of tubing as follows:

Basin Dakota - 7200' of 2-3/8" NUI 4.70# J-55 Tubing  
Blanco Mesaverde - 5120' of 1" Artes Integral jt. 1.70# box and pin alpha string.

Dakota to be produced thru 2-3/8" tubing and Mesaverde thru 1-1/2" casing.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
