DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

We proposed to and drill a well to approximately 7700' with rotary drilling equipment to test the Dakota formation. The following casing and cementing program will be used:

250' 8 7/8" BW/200 SOX
0 to 1000' 4 1/2" OD 11.6# J-55 ST&C Casing
1000 to 6700' 4 1/2" OD 10.5# J-55 ST&C Casing
6700 to 7700' 4 1/2" OD 11.6# J-55 ST&C Casing

The pipe will be cemented thru casing shoe with 150 sacks 12% gel cement containing 12 1/2% gilsonite per sack followed by 100 sacks latex cement.

A second stage of cement will be thru a multiple stage cementing collar at approximately 5600', 350 sbs. 12% gel followed by 50 sbs. neat will be used.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced. This amount is 200% of volume required to cover both Mesa Verde and Pictured Cliffs.
