### DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

The production from this well has decreased to approximately 35 barrels of oil and 2 barrels of water. In an effort to increase the production it is proposed to cement 60' of 5 1/2" 15.5# J-55 Liner thru Tooto Sand with 25 sacks cement, perforate liner from 6635 to 6686 approximately, then fracture with 10,000# 40-60 sand and 10,000 gallons Diesel.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
