Re: Application for Dual Completion of
Northwest Production Corporation
Well "N" 8-8, T26N, R4W, Rio Arriba
County, New Mexico

Attention: Mr. Emery C. Arnold

Gentlemen:

Reference is made to our letter of March 29, 1957, requesting approval of our plan to dually complete Well "N" 8-8 in the Greenhorn and Graneros-Dakota formations. By letter dated April 9, 1957, you were asked to void our request of March 29 inasmuch as the Greenhorn formation was nonproductive after fracturing and testing.

While drilling Well "N" 8-8 a natural blow of 670 MCFD of gas with no fluid was encountered in the Gallup formation. Request is made, at this time, for your approval of our plan to dually complete this well in the Gallup and Graneros-Dakota formations. It is anticipated that the Gallup will be a gas producing zone.

The proposed work for completing Well "N" 8-8 consists of squeezing the existing perforations from 7610 to 7666 using 75 sacks of regular cement. With the Graneros-Dakota formation isolated, the 5½ inch liner will be perforated from 7208 to 7312 feet and the Gallup formation will be fractured using water and sand. The well will be cleaned out to total depth and 2-3/8 inch OD tubing will be hung at approximately 7750 with a production packer set at approximately 7600 feet and an Otis side-door choke with straight-thru mandril at 7599 feet. The well will be completed to produce the Graneros-Dakota formation through the tubing and the Gallup formation through the tubing-casing annulus.

Please advise if you desire additional information before approving the proposed work.

Very truly yours,

1. The first of these is the fact that the majority of the population of the United States is now living in urban areas. This is a result of the process of urbanization, which has been going on since the beginning of the 20th century. The second factor is the fact that the majority of the population of the United States is now living in the South and West. This is a result of the process of migration, which has been going on since the beginning of the 20th century. The third factor is the fact that the majority of the population of the United States is now living in the middle class. This is a result of the process of social mobility, which has been going on since the beginning of the 20th century.

1. The first step is to identify the problem. This involves understanding the situation, gathering information, and defining the problem clearly. 2. The second step is to analyze the problem. This involves breaking the problem down into smaller parts, identifying the causes, and determining the scope of the problem. 3. The third step is to develop a plan. This involves identifying the resources available, setting priorities, and determining the steps that need to be taken to solve the problem. 4. The fourth step is to implement the plan. This involves putting the plan into action, monitoring progress, and making adjustments as needed. 5. The fifth step is to evaluate the results. This involves assessing the effectiveness of the solution, identifying any remaining issues, and determining the lessons learned.

Re: Application for Dual Completion of
Northwest Production Corporation
Well "N" 8-8, T26N, R4W, Rio Arriba
County, New Mexico

Attention: Mr. Emery C. Arnold

Gentlemen:

Reference is made to our letter of March 29, 1957, requesting approval of our plan to dually complete Well "N" 8-8 in the Greenhorn and Graneros-Dakota formations. By letter dated April 9, 1957, you were asked to void our request of March 29 inasmuch as the Greenhorn formation was nonproductive after fracturing and testing.

While drilling Well "N" 8-8 a natural blow of 670 MCFD of gas with no fluid was encountered in the Gallup formation. Request is made, at this time, for your approval of our plan to dually complete this well in the Gallup and Graneros-Dakota formations. It is anticipated that the Gallup will be a gas producing zone.

The proposed work for completing Well "N" 8-8 consists of squeezing the existing perforations from 7610 to 7666 using 75 sacks of regular cement. With the Graneros-Dakota formation isolated, the 5 1/2 inch liner will be perforated from 7208 to 7312 feet and the Gallup formation will be fractured using water and sand. The well will be cleaned out to total depth and 2-3/8 inch OD tubing will be hung at approximately 7750 with a production packer set at approximately 7600 feet and an Otis side-door choke with straight-thru mandril at 7599 feet. The well will be completed to produce the Graneros-Dakota formation through the tubing and the Gallup formation through the tubing-casing annulus.

Please advise if you desire additional information before approving the proposed work.

Very truly yours,

NORTHWEST PRODUCTION CORPORATION
