Re: Application for Dual Completion
of Northwest Production Corporation
Well "W" 8-8, T26N, R4W, Rio Arriba
County, New Mexico.

Attention: Mr. Emory C. Arnold

Gentlemen:

Reference is made to our letter of April 10 requesting tentative approval of our plan to dually complete Well "W" 8-8 in the Gallup and Graneros-Dakota formations. By letter dated May 2, 1957, you were asked to void our request of April 10 inasmuch as the Gallup formation was nonproductive after fracturing and testing.

Request is made, at this time, for your approval of our plan to dually complete Well "W" 8-8 in the Mesaverde and Graneros-Dakota formations. The proposed work includes squeezing the existing Gallup perforations from 7208 to 7312 using 50 sacks of regular cement. The $5\frac{1}{2}$ inch liner will be perforated from 5156 to 5770 and the Mesaverde formation fractured using water. The well will be cleaned out to total depth and 2-3/8 inch OD tubing will be hung at approximately 7750 feet with a production packer set at approximately 7200 feet, and an Otis side-door choke with straight thru mandril at 7199'. The well will be completed to produce the Graneros-Dakota formation through the tubing and the Mesaverde formation through the tubing-casing annulus.

Please advise if you desire additional information before approving the proposed work.

Yours very truly,

NORTHWEST PRODUCTION CORPORATION
