The elevation of the derrick floor above sea level is 7154 ft.

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

The 5 1/2" casing was perforated from 3805' to 3835' with 120 jet shots. The 2" tubing was run. The well was sandfrased with 15,500 gallons of water and 15,000 pounds of sand. Injection rate was 35 barrels per minute at 1450 pounds pressure. After snubbing off water load the well was flowed to clean out and test. Well is now shut-in for potential test.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
