The effect of the diet on the blood sugar is a subject of great importance to the physician. It is well known that the diet has a profound effect on the blood sugar, and that the blood sugar is a very important factor in the diagnosis and treatment of many diseases. The purpose of this article is to review the literature on this subject and to present some of the results of our own research.

The first part of the article is a review of the literature. It begins with a discussion of the normal blood sugar and the factors that influence it. It then discusses the effect of the diet on the blood sugar, and the effect of the blood sugar on the diet. The second part of the article is a report of our own research. We have conducted a series of experiments on the effect of the diet on the blood sugar, and the results are presented in the following tables.

Table 1. The effect of the diet on the blood sugar. The blood sugar was measured at intervals of 15 minutes during the day. The diet was varied as follows: (1) normal diet, (2) high carbohydrate diet, (3) high protein diet, (4) high fat diet, (5) low carbohydrate diet, (6) low protein diet, (7) low fat diet.

Table 2. The effect of the blood sugar on the diet. The diet was varied as follows: (1) normal diet, (2) high carbohydrate diet, (3) high protein diet, (4) high fat diet, (5) low carbohydrate diet, (6) low protein diet, (7) low fat diet. The blood sugar was measured at intervals of 15 minutes during the day.
