Questar E&P respectfully requests a six month extension to either return the well to production or plug and abandon it. We have recently completed two workovers (Lindrith #13 and Lindrith #14 wells) in this area. These wells had extreme scale build-up on the inside of the tubing and casing. These two wells were acidized and put back on line. The Lindrith #14 rate increased from 90 MCFD to about 180 MCFD after the acid job. We have had numerous problems with the compressor and have not established a stabilized, long term rate to justify spending another \$85,000 to try the same procedure on the Lindrith #29 well. The Lindrith #13 well is logged off and we are swabbing it to kick it off.

Thus, a six month extension will allow us to analyze the subject well to make a decision to spend the money to do a workover or plug and abandon it.
