DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

The above well was spudded on August 3, 1963 and drilled to a total depth of 218'. 10-3/4" casing was set at that depth with 140 sacks cement containing 2% calcium chloride. Cement circulated to surface. After waiting on cement tested casing with 900 psi. Test ok. Reduced hole to 9-7/8" and resumed drilling.

Well drilled to a total depth of 3895' and 7-5/8" casing set at that depth with 140 sacks Type "C" neat cement. After waiting on cement tested casing with 1000 psi. Test ok. Reduced hole to 6-3/4" and resumed drilling.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations can be commenced.
