NORTHWEST NEW MEXICO PACKER LEAKAGE TEST INSTRUCTIONS

- 1. A pactur lesings test shall be commenced as each multiply completed well within some days after except that the provincely produced none shall remain sharin while the none which actual completion of the well, and annually thereafter as prescribed by the order authorizing the multiple completion. Such tests shall also be connected on all multiple completions within seven days.

 7. Pressures for gas-more tests must be measured on each some with a deadweight. following recomplation and/or chemical or frac-aire systemess, and whenever remedial work has been done on a well during which the sector or the tubing have been disturbed. Tests shall also be taken at any time that communication is suspected or when requested by the Division.
- At least 72 hours prior to the commencement of any packer leakage test, the operator shall notify the Division in writing of the exact time the test is to be commenced. Offset operators shall also be so notified
- 3. The packet leakage test shall commence when both some of the dual completion are shall for pressure ambilization, both monet shall remain shar-in until the well-head pressure in each has stabilized, provided however, that they need not remain shut-in more than seven days.

 4. For flow Test No. 1, one zone of the dual completion shall be preduced at the normal rate of
- production while the other some restains shap-in. Such test shall be continued for seven days if the case of a gas well and for 24 hours in the case of an oil well. Note: if, on an initial packer leakage test, a gas well is being flowed to the atmosphere due to the lack of a pipeline conseccion the flow period shall
- 5. Following completion of flow Test No. 1, the well shall again be shut-in, in accordance with Paragraph 3 above.
- 6. Flow Test No. 2 shall be conducted even though no leak was indicated during flow Test No. 1. Procedure for Flow Test No. 2 is to be the same as for Flow Test No. 1

- presence gauge at time intervals as follows: 3 hours tests: immediately prior to the beginning of each flow-period, at fifteen minus inservals during the first hour thereof, and at hourly intervals thereafter, including one pressure measurement immediately prior to the flow period, at least one time during each flow period (at sily the anidway point) and immediately prior to the conclusion of each flow period. Other pressures may be taken as desired, or may be requested on wells which have previously shown questionable test data.
- 24-hour oil seem tunis; all pressures, throughout the entire test, shall be county measured and recorded with recording pressure gauges the accuracy of which must be checked at least twice, once at the beginning and once at the end of each test, with a dandweight pressure gauge. If a well is a gas-oil or an oil-gas duel completion, the succeeding gauge shall be required on the oil zone only, with deadweight pressures as required above being taken on the gaz none.
- 8. The results of the above described tests shall be filed in triplicate within 15 days after compission of the test. Tests shall be filed with the Aztec District Office of the New Mexico Oil Connervation Division of Northwest New Mexico Packer Lesizace Test form Revised 10/01/78 with all deadweight pressures indicated thereos as well as the flowing temperatures (gas zones only) and gravity and GOR (oil zones only).
