Aztec, New Mexico

Gentlemen:

Our Breech "E" Well T-104, SE SE 5-26N-6W, was completed in December, 1958 to produce from the lower Tocito sand through perforations 6701 to 6711.

Recently the upper part of the Tocito sand was perforated from 6669 to 6677. Before these last perforations were made the average daily production was approximately 95 BOPD. The attached Gas-Oil Ratio Report shows the well now capable of producing 300 BOPD with a gas-oil ratio of 1419.

This is to request that the allowable of this well be adjusted to 147 BOPD effective November 1, 1959, the day the well was swabbed in and put on production after the latest perforating was finished.

Yours very truly,

CAULKINS OIL COMPANY

*Frank Gray*
