January 15, 1960

Well No. **T-102** is located **660** ft. from **INTX** line and **1980** ft. from **W** line of sec. **5**

SE 1/4 SW 1/4 **5** **26N** **6W** **NNPM**
(1/4 Sec. and Sec. No.) (Twp.) (Range) (Meridian)

South Planco Tooto **Rio Arriba**
(Field) (County or Subdivision)

New Mexico **CON. COM.**
(State or Territory) **DIST. 8**

The elevation of the derrick floor above sea level is **6538** ft. G.L.

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

We propose to drill a well at the location described above to a depth of approximately 6700' to test the Tooto sand. We propose to use rotary drilling equipment with the following casing program:

10 3/4" 32.75# H-40 casing set at 450' and cemented top to bottom.
7" 23# J-55 casing set at approximately 6700' and cemented from shoe to top of Cliff House sand.

Casing will be set through the Tooto and perforated. The sand will be fractured if necessary to obtain an efficient rate of production.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
