Blanco Mesaverde & Basin Rio Arriba New Mexico
(Field) (County or Subdivision) (State or Territory)

Dakota & Gallup undesignated

The elevation of the derrick floor above sea level is 7294 ft.

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

This is a notice of intention to change plans from a Mesaverde and Dakota dual completion to a triple completion in the Mesaverde, Gallup and Dakota. This is contingent on approval of a triple completion by the Oil Conservation Commission scheduled for hearing on March 11, 1964. These zones will be produced thru three strings of tubing and isolated by using a Baker model "D" between the Dakota and Gallup and a Baker model "J" between the Gallup and Mesaverde. The Dakota will be produced thru 2 1/16" tubing, the Gallup thru 1 1/2" tubing and the Mesaverde thru 1" tubing.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
