Re: S. F. 080312-A
Well No. 1 Inter 5

Attention: S. J. Mathews

Gentlemen:

The completion of your well No. 1 Inter 5, located in the SE¹NE¹ section 5, T. 26 N., R. 1 E., N.M.P.M., Rio Arriba County, New Mexico, is not satisfactory. The well is at a total depth of 2780 feet in the Graneros formation and the hole is caved to 2553 feet with 4-1/2" casing set on the savings. The well is producing oil from the Gallup and Sanostee zones with the Greenhorn and Graneros zones open to the above mentioned producing zones through the savings. It will be necessary to clean out the well to total depth and plug the well back with cement, either to the base of the 4-1/2" casing or up into the 4-1/2" casing, whichever you prefer.

Very truly yours,

(Orig. Sgd.) P. T. McGRATH

P. T. McGrath
District Engineer

1. The first step in the process of the investigation is the identification of the problem. This is done by the investigator who is assigned to the case. The investigator will then gather information about the problem and the people involved. This information will be used to develop a plan of action. The plan of action will be based on the information gathered and the investigator's own experience. The plan of action will be used to guide the investigation and to ensure that the problem is solved. The investigator will then implement the plan of action and will monitor the progress of the investigation. The investigator will then report the results of the investigation to the appropriate authorities. The results of the investigation will be used to determine the cause of the problem and to prevent the problem from occurring again. The investigator will then close the case and will be available for any further questions.
