DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

It is intended to drill a well on this location to the Harrison formation. A 13 3/4" rotary hole will be drilled and 450' of 10 3/4" - 32.75# surface casing will be set with the cement circulated out. From below the surface casing a 8 3/4" rotary hole will be drilled to 7500' and/or the Harrison formation. If commercial production is found then 7" - 23# production casing will be run and the well completed.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
