The elevation of the derrick floor above sea level is 7175 ft.

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding, cementing points, and all other important proposed work)

We propose to drill the above well to a total depth of 6300' with Rotary Tools. We expect to test the following sands at the following approximate depths if indicative of oil or gas show:

Pictured Cliffs
Mesa Verde

We expect to test any other sands that appear productive of oil or gas. CASING PROGRAM: Approximately 300' of 10-1/4" Surface Casing w/approximately 300 sz cement, approximately 4200' of 7-5/8" intermediate casing w/approximately 150 sz cement, approximately 2300' of 5 1/2" liner w/approximately 200 sz cement on bottom and will squeeze top of liner w/approximately 200 sz cement. We propose to perforate and sandwaterfrac productive sands in the Pictured Cliffs and Mesa Verde Zones for Comp.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
