Re: Jicarilla #7, E-36-26N-5W

Gentlemen:

The packer-leakage test for the above captioned well has not been received for the year 1975 as per rule 112-A 6 C.

If a packer leakage test on this well is not received within thirty days, the transporters will be ordered to cease taking products.

The shut-in order will remain in effect until further order of the Commission.

If there are questions, please contact this office.

Yours very truly,

N. E. Maxwell, Jr.
N. E. Maxwell, Jr.
Engineer, District #3

cc: Oil Conservation Commission
Santa Fe, New Mexico

1. The first step in the process of creating a new product is to identify a market need. This involves conducting market research to determine what consumers want and need. Once a market need is identified, the next step is to develop a concept for a product that meets this need. This concept should be based on the market research and should be unique and innovative. The concept is then developed into a detailed product design, which includes specifications for the product's features, functions, and appearance. This design is then used to create a prototype of the product, which is used to test the concept and gather feedback from potential customers. Finally, the product is manufactured and marketed to the target market.
