13. Describe Proposed or Completed Operations (Clearly state all pertinent details, and give pertinent dates, including estimated date of starting any proposed work. If well is directionally drilled give subsurface locations and measured and true vertical depths for all markers and zones pertinent to this work.

Apache Corporation took over the management of this well for MW Petroleum in September 1991. Apache attempted to produce casing head gas, but the pipeline pressure was higher than the well's casing pressure. The downhole rod pump was stuck, making a pump change necessary, which was not done at that time.

MWP's Exploration Dept. is evaluating an offset operator, Mallon Oil Co., on their re-completions in the Mesa Verde formation, to see if it is feasible to also re-complete this well in the MV. Horizontal drilling is also being evaluated as the technology increases and the price decreases.

MW Petroleum is requesting that this lease be held with a Temporary Shut-In Status until both issues are evaluated for potential in this well.
