Dear Cecil:

The 1984 packer tests on the referenced wells were inconclusive in proving zone separation.

Please reschedule and retest the wells in such a manner as to prove zone separation. Shut both zones in for a minimum of 3 days. Blow the higher pressured zone to the atmosphere for as long as it takes to get a significant pressure drop. Advise this office at least 24 hours prior to tests, so we may provide a witness.

Yours truly,
