

STATE OF NEW MEXICO  
ENERGY AND MINERALS DEPARTMENT

## OIL CONSERVATION DIVISION

Revised 10/1/78

This form is not to  
be used for reporting  
packer leakage tests  
in Southeast New Mexico.

## NORTHWEST NEW MEXICO PACKER-LEAKAGE TEST

Operator Syntex Energy Corp. Lease Jicarilla "T" Well No. 12-E  
Location  
of Well: Unit M Sec. 35 Twp. 26N Rge. 5W County Rio Arriba  
Type of Prod. Method of Prod. Prod. Medium  
Name of Reservoir or Pool (Oil or Gas) (Flow or Art. Lift) (Tbg. or Csg.)

Upper Completion	Mesaverde	Gas	Flow	Casing
Lower Completion	Dakota	Gas	Flow	Tubing

**PRE-FLOW SHUT-IN PRESSURE DATA**

Upper Compl	Hour, date 10:30 A.M. Shut-in 10/21/81	Length of time shut-in 3 Days	SI press. psig 768	Stabilized? (Yes or No) No
Lower Compl	Hour, date 10:30 A.M. Shut-in 10/21/81	Length of time shut-in 3 Days	SI press. psig 914	Stabilized? (Yes or No) No

FLOW TEST NO. 1

Commenced at (hour, date)\* 10:30 A.M. 10/24/81 Zone producing (Upper or Lower): Lower

Time (hour, date)	Lapsed time since*	Pressure		Prod. Zone Temp.	Remarks
		Upper Compl.	Lower Compl.		
10:30 A.M. 10/22/81	1 Day	719	823		
10:30 A.M. 10/23/81	2 Days	740	875		
10:30 A.M. 10/24/81	3 Days	768	914		
10:30 A.M. 10/25/81	4 Days	775	350	71°	
10:30 A.M. 10/26/81	5 Days	781	307	71°	

Production rate during test

Oil: \_\_\_\_\_ BOPD based on \_\_\_\_\_ Bbls. in \_\_\_\_\_ Hrs. \_\_\_\_\_ Grav. \_\_\_\_\_ GOR

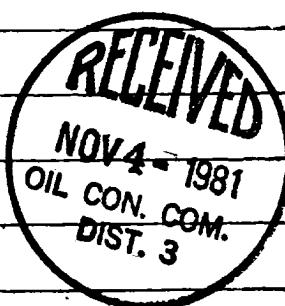

Gas: \_\_\_\_\_ MCFPD; Tested thru (Orifice or Meter): \_\_\_\_\_

MID-TEST SHUT-IN PRESSURE DATA

Upper Compl	Hour, date Shut-in	Length of time shut-in	SI press. psig	Stabilized? (Yes or No)
Lower Compl	Hour, date Shut-in	Length of time shut-in	SI press. psig	Stabilized? (Yes or No)

FLOW TEST NO. 2

Commenced at (hour, date) \*\* | Zone producing (Upper or Lower):

### Production rate during test

Oil: \_\_\_\_\_ BOPD based on \_\_\_\_\_ Bbls. in \_\_\_\_\_ Hrs. \_\_\_\_\_ Grav. \_\_\_\_\_ GOR \_\_\_\_\_  
Gas: \_\_\_\_\_ MCFPD; Tested thru (Orifice or Meter): \_\_\_\_\_

**REMARKS:**

hereby certify that the information herein contained is true and complete to the best of my knowledge.

Title Production Sup't.

Date 10/30/81

NORTHWEST NEW MEXICO PACKER LEAKAGE TEST INSTRUCTIONS

1. Packer leakage tests shall be commenced in each multiply completed well after completion or initial completion of the well, and annually thereafter, or more frequently by the order authorizing the multiple completion, upon any completion or re-completion on all multiple completions within one year. This applies to completion, advisor chemical or fracture treatment, or abandonment if such work has been done on a well during which the packer or tubing has been disturbed. Tests shall also be taken at any time that a malfunction is suspected or when requested by the Division.

2. At least 24 hours prior to the commencement of any packer leakage test, the operator shall notify the Division in writing of the exact time the test is to be commenced. Offset operators shall also be so notified.

3. The packer leakage test shall commence when both zones of the dual completion are shut-in for pressure stabilization. Both zones shall remain shut-in until the well-head pressure in each has stabilized, provided however, that they need not remain shut-in more than seven days.

4. In Flow Test No. 1, one zone of the dual completion shall be produced to the normal rate of production while the other zone remains shut-in. Such shut-in period shall be extended for seven days in the case of a gas well and for 24 hours in the case of an oil well. Note: If, on an initial packer leakage test, a well begins flowing to the atmosphere due to the lack of a seal, the duration of the flow period shall be three hours.

5. Following completion of Flow Test No. 1, the well shall again be shut-in, at approximately the intervals shown.

6. Flow Test No. 2 shall be conducted even though no leak was indicated during Flow Test No. 1. Procedure for Flow Test No. 2 is to be the same as for Flow Test No. 1 except that the previously producing zone shall remain shut-in while the zone which was previously shut-in is produced.

7. Pressures for gas-zone tests must be measured on each zone with a deadweight pressure gauge at time intervals as follows: 3-hour tests: immediately prior to the beginning of each flow-period, at fifteen-minute intervals during the first hour thereof, and at hourly intervals thereafter, including one pressure measurement immediately prior to the conclusion of each flow period. 7-day tests: immediately prior to the beginning of each flow period, at least one time during each flow period (at approximately the midway point) and immediately prior to the conclusion of each flow period. Other pressures may be taken as desired, or may be requested on wells which have previously shown questionable test data.

24-hour oil zone tests: all pressures, throughout the entire test, shall be continuously measured and recorded with recording pressure gauges, the accuracy of which must be checked at least twice, once at the beginning and once at the end of each test, with a deadweight pressure gauge. If a well is a gas-oil or an oil-gas dual completion, the recording gauge shall be required on the oil zone only, with deadweight pressure as required above being taken on the gas zone.

8. The results of the above-described tests shall be filed in triplicate within 15 days after completion of the test. Tests shall be filed with the Aztec District Office of the Oil Conservation Division on Northwest New Mexico Packer Leakage Test Form Revised 10-1-73, with all deadweight pressures indicated thereon as well as the flowing temperatures (gas zones only) and gravity and GOR (oil zones only). A pressure versus time curve for each zone of each test shall be constructed on the reverse side of the Packer Leakage Test Form with all deadweight pressure points taken indicated thereon. For oil zones, the pressure curve should also indicate all key pressure changes which may be reflected by the recording gauge charts. These key pressure changes should also be tabulated on the front of the Packer Leakage Test form.
