DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

It is proposed:

- 1) To place a cement plug across Dakota and approximately 200 feet into the bottom of 5-1/2" casing.
- 2) Determine free point of the 5-1/2" casing and pull as much as possible.
- 3) Plugback to bottom of the intermediate pipe with mud and set a bridging plug there.
- 4) Perforate Mesaverde and test.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
