DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

On October 20, 1961, the well was found dead. A snub was run and the well was found to be full of water and drilling mud. A casing leak was indicated. A bridge plug was set 4579' and tested. The leak was located at 795'. The leak was squeezed with 100 sacks of cement. WOC 2 1/2 hrs, tested csg. to 1,500' for 30 minutes OK. Drilled Bridge Plug and well is now on production.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
