March 14, 1962  
Century Exploration Mobil-Rudman  
Well No. 2 is located 790 ft. from N line and 1850 ft. from E line of sec. 21  
SW 1/4 Sec. 21 25N 9W NMPN  
(1/4 Sec. and Sec. No.) (Twp.) (Range) (Meridian)  
Basin Dakota San Juan New Mexico  
(Field) (County or Subdivision) (State or Territory)

The elevation of the derrick floor above sea level is 6602.0 ft. G.L.

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

Set casing at 6494' KB with centralizers at 6431, and 6400, 6369, & 6245 and rotating scratchers from 6422-52 and 6365-75. Cemented with 150 sacs Ideal Portland cement with 8% gel followed by 50 sacs neat Ideal Portland cement using top and bottom plug. Displaced top plug to shoe with 106 bbls. water at 11 bbls. per min. Bumped plug with 2300 psi. Float did not hold. Bumped plug again. Shut in casing with 500 psi. Job complete 10:15 P.M. Set slips in head with wt. of casing (60,000#). Released pressure at 3:00 A.M. Cut off pipe & nippled up. B & R Service men ran temperature survey 8 hrs. after cementing & found top of cement at 5275' KB (84% fillup).

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.

Century Exploration Mobil-Rudman  
Well No. 2 is located 790 ft. from [S] line and 1850 ft. from [W] line of sec. 22

Sec. 22 (4 Sec. and 36 Sec. No.) 25N (Twp.) 09W (Range) T12N (Meridian)  
Vasita Roberts (Field) San Juan (County or Subdivision) New Mexico (State or Territory)

The elevation of the derrick floor above sea level 6602.0 ft. S.L.

## DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudlogging jobs, cementing points, and all other important proposed work)

Run 2" NUP tubing with 3-7/8" bit and cleaned out to plug (at 6487 by tubing measurement). Pressure tested casing to 3550 psi. with 110 psi. drop in 10 minutes (mostly due to leak in BOP). Displaced water from hole with 95 bbls. 15 G/Gal. water. Spotted 250 gal. 7% MEA on bottom. Filled tubing. Rigged up Solax and ran Gamma Ray Collar Correlation log from 6487 to 6500. Correlation log found formations at same depth as US Induction Survey. Collars were three feet low to casing tally. Perforated 6484-34 with 4 super dyna jets per foot (33 holes). Filled casing and squeezed MEA to perforated interval. Breakdown pressure 1100 to 2700 at 4 BPM. Perforated 6352-6372 with 4 super dyna jets per foot (80 holes).

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
