October 25, 1960

Mar-Go-La-Ta

Well No. 1 is located 1900 ft. from NE line and 1900 ft. from E line of sec. 23NW 1/4 of SE 1/4 Sec. 23
(1/4 Sec. and Sec. No.)23N
(Twp.)11W
(Range)NMPM
(Meridian)Misti Lower Gallup
(Field)San Juan
(County or Subdivision)New Mexico
(State or Territory)The elevation of the derrick floor above sea level is 6999 ft.

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

This well was worked over as follows:

The well was killed and tubing was pulled. The 5 1/2" casing was perforated 5046 to 5058 feet with 1/2 L.W. "F" Balls per foot. The well was then fractured in the new perforations 5046 to 5058 feet, and the old perforations 5070 to 5079 feet with 40,000 gallons loose crude and 40,000 lb. sand in two stages separated by 50 ball sealers. The tubing was then run and the well switched to flow. After recovering lead oil the well flowed 166 barrels of oil, 3.3 MCF of gas, and no water in 1/2 hrs. OGR 270.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
