DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work.)

Commenced workover **4-30-63**.

Reason for workover was to increase production by re-perforating perforated interval and acidizing perforations now plugged off by scale.

Pulled rods and tubing and re-perforated 5" casing from 4001' to 4021' with 2 bullets per foot. Acidized perforations through tubing with 500 gallons of non-hydrofluoric acid solution. Acid went in formation on a vacuum. After completing treatment, pumped 30 barrels of lead oil in 4 hours run rods and connected up pumping equipment. After recovering all of lead oil, pumped 20 barrels of oil and 6 barrels of water on 24 hour test ending 5-11-63.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
