Pursuant to approval for water injection, Giant Exploration & Production Company intends to convert this well to a Lower Gallup water injector for pressure maintenance. A bridge plug will be set at 4904' to isolate injection to the uppermost set of perforations (4876' - 4898'). The perforations will then be acidized with 500 gallons of 15% HCl. Water injection will occur through 2-3/8" tubing set with a tension packer at 4770'. Prior to commencing injection, this well's casing will be pressure tested and any leaks will be repaired by cement squeezing.
