DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

We propose to drill this well with rotary tools to a sufficient depth to test the Gallup Sand expected at approximately 4840'. We propose to set 100' of 8 5/8" casing and cement to surface. We expect to drill through to the Gallup Sand section to a depth of approximately 5000' and if productive, set 5 1/2" casing through the zone and cement at least 300' above the top of the pay zone.

We propose to gun perforate the casing and sand oil frac during completion.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
