

FORMATION RECORD—Continued[illegible]

HISTORY OF OIL OR GAS WELL

It is of the greatest importance to have a complete history of the well. Please state in detail the dates of redrilling, together with the reasons for the work and its results. If there were any changes made in the casing, state fully, and if any casing was "sidetracked" or left in the well, give its size and location. If the well has been dynamited, give date, size, position, and number of shots. If plugs or bridges were put in to test for water, state kind of material used, position, and results of pumping or bailing.

In-Ri-Da-rah Well No. 2 was spudded on December 26, 1957, and on December 27, 1957, 8-5/8" casing was set at 293' with 250 sacks of cement. After waiting on cement for twenty-four hours, casing and water shut-off were tested with 400 pounds pressure for thirty minutes, which held with no drop in pressure.

Five and one-half inch casing was set at 4943' with 75 sacks 5% gel cement, and followed by 75 sacks neat cement. After waiting on cement, 5-1/2" casing was tested with 2500 pounds pressure (special test) for thirty minutes, which held with no drop in pressure.

Perforated Gallup with four shots per foot 4761-4813, 4848-56, 4862-70. Sand-oil
fracked with 50,000 gallons oil and 50,000 pounds sand. Formation broke at 2500
pounds. Average injection rate 48 BPD. Completed as pumping oil well Bisti-Lower
Gallup Field on February 20, 1958. Potential Test February 20, 1958, 146 BOPD with
a gas-oil ratio of 421 CFPS.

The minimum on this basis is for the condition of the water at 9:00 a.m.
