### DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

This water injection well has developed severe channels in several stringers of the Lower Gallup Sand. We propose to squeeze the entire Gallup interval, drill out the squeeze, and reperforate only in the 1st bench of the Lower Gallup Sand. Squeeze to be tested to 2000 psi for 30 minutes.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
