Re: San Juan 27-5 Unit #53 M-05-27N-05W

Dear Tanya:

The 1994 Packer Leakage Test on the referenced well was inconclusive. Please reschedule and retest the well in such a manner as to prove zone separation. Shut both sides in for a minimum of 3 days. Flow the higher pressured zone to the atmosphere until the pressure decreases enough to determine if there is separation. Notify this office at least 24 hours prior to the test so we may provide a witness.

Yours truly
