Bisti-Gallup **San Juan** **New Mexico**
 (Field) (County or Subdivision) (State or Territory)

The elevation of the derrick floor above sea level is **6162** ft.

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

We perforated the 5 1/2" OD casing from 4886 - 4891 and 4896-4907 with Lane Wells "E" gun. These perforations were fractured with 15,000 gal lease oil & 15,000# sand. A bridge plug was set at 4870' and the casing was perforated 4829-4846. These perforations were fractured with 20,000 gal lease oil & 20,000# sand. The bridge plug was drilled out and the well cleaned out to 4935' and the 2 3/8" EUE tubing was run.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
