If well is directionally drilled, give subsurface locations and measured and true vertical depths for all markers and zones pertinent to this work.)*

It is intended to plug and abandon the subject well in the following manner:

Rig up, kill well, circulate the hole.
Spot a 45 sk. cement plug across the perforated interval (2026-35'). Pressure displace 20 sks. of cement through the perforations. Plug fills 5 1/2" casing to 1717'.
Pull tubing. Spot a 25 sk. cement plug at the base of the Ojo Alamo (1328') to fill to 1110'.
Determine the free point of the 5 1/2" casing by stretch method. Shoot off casing above the free point and recover.
Spot a 60 sk. cement plug in the open hole section on the casing stub to fill 207' above the casing stub.
Spot a 60 sk. cement plug in the open hole section below the base of the surface casing to fill 207' of open hole.
Place a 10 sk. cement plug at the surface, install a dry hole marker and clean up location.

18. I hereby certify that the foregoing is true and correct
