(Twp.)

R-11-W
(Range)

N.M.P.M.
(Meridian)

Wildcat
(Field)

San Juan
(County or Subdivision)

New Mexico
(State or Territory)

The elevation of the derrick floor above sea level is _____ ft. (To be reported later.)

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

We propose to drill the above well with rotary tools to an approximate total depth of 6400' to test Dakota possibilities. Stimulation and completion will be indicated upon reaching this formation.

The following casing program is proposed:

| SIZE | DEPTH | CEMENT | REMARKS |
|--------|-------|--------|---|
| 9-5/8" | 500' | | Heat—circulate to surface. |
| 7" | 6400' | | Use 150% of theoretical amount to bring cement to about 500' above top of Gallup. |

Copies of location plat are attached. A copy of any survey run will be submitted upon completion of well.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
